

SCORPIONS

About

SCORPIONS - A Digital Asset that heals.

SCORPIONS is a revolutionary new DeSci NFT Project with the goal of using biologically sourced peptides to treat inflammation related diseases.

The venom of the blue scorpion has been shown to have incredible results in the treatment of medical conditions, including cancer, heart disease, autoimmune diseases, and chronic pain.

The versatility and impressive health benefits of Blue Scorpion Venom are well-known throughout the world. They include reducing inflammation, boosting the immune system, and relieving pain. Its rapid sublingual or nasal delivery method allows for quick absorption into the bloodstream, leading to exceptional recovery experiences. These effects are due to its ability to suppress COX-2 enzyme-produced chemicals and promote the body's natural healing and regenerative abilities.

Numerous studies have been conducted on Blue Scorpion Venom in world-renowned institutions, with media coverage on ABC Nightline, NBC, and Fox news. This natural compound is extracted from the Caribbean Blue Scorpion (*Rhopalurus Princeps*), which contains low molecular weight peptides, amino acids, proteins, and 57 minerals. Modern technologies have been used to isolate and filter the essential minerals, which have been polarized using a patented methodology (#US 8,097,284 B2) to increase potency and binding preferences with abnormal cells.

SCORPIONS NFTs represent both a physical 12 month subscription for Blue Scorpion Venom Homeopathic Elixir, and participation in our community of like minded individuals who are on a similar journey to regain their lifestyle by improving their health.

SCORPIONS is the first NFT project on what we hope will be an expansive blockchain retail experience for both Dgens and crypto N00bs alike. We want to be able to give the non-Web3-native a simple, secure, and positive first Blockchain experience. For Web3 Natives we want to provide the community and project ownership that we all love in the NFT / Crypto worlds. Join us as a "Founder" and be a part of a community that is looking to disrupt current modalities in Healthcare, Bio-Science, Retail, Ecology, and Social Responsibility.

Each "founders" NFT is redeemable for a 12 month supply of Blue Scorpion Venom homeopathic elixir, and personalized user plan from our team. Our Founding Partners will form the core of our community and will help provide governance to our community and project as we reimagine ineffective industries in a better, more sustainable, image.

Health

More than 50 percent of all deaths globally are attributable to inflammation-related diseases. It is the main cause of a wide range of chronic diseases, including cardiovascular disease, diabetes, cancer, IBS / IBD and neurodegenerative disorders. Chronic inflammation is a major driver of disease, and that targeting inflammation is an effective strategy for preventing and treating many chronic illnesses.

This means 50% of you, our Founders, can benefit directly from the anti-inflammatory properties of the Blue Scorpion Venom, and close to 100% of all of us have been touched by inflammation related disease from someone in our families or friend groups.

Chronic inflammation is thought to contribute to the development of several types of cancer, including colorectal cancer, lung cancer, and liver cancer. Cancer is the second leading cause of death worldwide. Globally, there were an estimated 20 million new cases of cancer and 10 million deaths from cancer in 2023. The cancer burden will increase by approximately 60% over the next two decades, further straining health systems, people and communities. The predicted global burden will increase to [about 30 million new cancer cases by 2040](#), with the greatest increases occurring in low- and middle-income countries. Blue Scorpion Venom has proven to work synergistically with current treatments for cancer including chemotherapy, and radiation.

We are constantly looking for new modalities that approach solutions to health and healing in a natural and sustainable way. We feel that only by turning to the earth, and it's natural remedies can we truly promote a lifestyle of health and prosperity.

Mission

Our mission at SCORPIONS is to promote the research and development for new peptide-based and biopharmaceutical treatments for inflammation related disease. The venom of the blue scorpion has been shown to have applications in the treatment of a variety of medical conditions, including cancer, autoimmune diseases, and chronic pain. By funding research and development, SCORPIONS are contributing to the advancement of medical science and bringing new treatments to the world!

Proceeds from the sale of SCORPIONS will also be used to fund habitat and ecosystem reclamation projects. The harvesting of the venom is done in cooperation with the Dominican Government Ministry of Health in a sustainable manner that ensures the preservation of the natural environment, and humane growth of the species.

Our social goal at SCORPIONS is to support emerging economies, benefit community enrichment programs, and promote social responsibility in 3rd world countries. The company will partner with local organizations to provide funding for education, preventative healthcare and other initiatives that benefit the community. By supporting the SCORPIONS NFT project, backers will be supporting a company that is committed to making a positive impact in the world.

We view SCORPIONS as the first of many DeSci projects that create a digital asset supported by our Blue Scorpion Venom commodity with a commitment to innovation in naturally derived peptide based sciences. By participating in the SCORPIONS project, backers have an opportunity to support a company that is working to make a positive impact on the world while also supporting the advancement of naturally derived homeopathic treatments for common causes of disease.

-Testamonials- We should have some pre-existing testimonials in the Drive

-Contact- Need Verbiage for Press / Media outreach

-Link to Documentation- Report PDFs

Loyalty Program

Phase 1: Introduction and Basic Rewards

- Leverage the ENS subdomain NFTs that customers already possess as the foundation of the loyalty program.
- NFTs act as unique identifiers for each customer, allowing tracking of purchases and activities, and distribution of rewards.
- Customers earn rewards through purchases, participation in community events, writing product reviews, and referring new customers.
- Customers can spend their loyalty points by redeeming them for discounts, gaining early access to new products, or purchasing exclusive items.

Phase 2: Advanced Features and Community Governance

- Introduction of more advanced features and giving customers a greater say in the direction of the platform.
- Customers can participate in community governance, vote on new products and policies, and trade their rewards with other customers using their ENS subdomain NFTs.
- In addition to the methods introduced in Phase 1, customers can now earn rewards by participating in community governance.
- Customers have more options for spending their rewards, including purchasing voting rights for community governance and trading their rewards with other customers.
- Introduction of community governance allows customers to vote on various aspects of the platform, giving them a sense of ownership and involvement in the business.

This phased approach allows us to gradually introduce new features and gauge the response of our customers. It also gives us the flexibility to adjust our program based on feedback and changing market conditions. We use the ENS subdomain NFTs to set our loyalty program apart from the competition and create a unique and engaging experience for our customers!

Silver Tier

- Subscription: 1 Month Auto-Renewal

- Benefits:

- One month supply of blue scorpion venom.
- Free custodial wallet.
- Access to an exclusive member community and lifestyle improvement content.
- Priority access to future product drops.
- Customer support for product-related inquiries and issues.
- Opportunity to sample and provide feedback on future products.
- Loyalty / Referral Program.
- 1 Vote on future utilities using the \$Web3C governance token. (in phase 2)

Gold Tier

- Subscription: 3 Month Auto-Renewal

- Benefits:

- All Silver Tier benefits.
- Discounted Price: 7.5% (adjustable).
- Greater \$Web3C cashback on purchases.
- Deeper Content Involvement.
- Light List Priority for future product drops.
- Access to special auctions for rare products or experiences.
- 3 Votes on future utilities using the \$Web3C governance token.

Platinum Tier

- Subscription: 12 Month Auto-Renewal

- Benefits:

- All Gold Tier benefits.
- Discounted Price: 15%.
- Expedited order delivery.
- Priority placement for future product drops.
- Exclusive merchandise airdrops.
- Exclusive Content / Experiences.
- More votes on future utilities using the **\$Web3C** governance token.

In this program, each ENS subdomain NFT serves as a proof of membership at each level. The NFTs will have already been minted and in the users wallet. This would allow the customers to prove their membership level simply by holding the corresponding NFT.

The NFTs will also be used to grant access to certain features on our web3 site. For example, we can token gate certain content so that if a Silver Tier NFT holder tries to access the Platinum Tier benefits, they won't be able to as we would have it token gated so only the Platinum token ids would grant access to a special auction.

Finally, the NFTs could also serve as a massive flex!! Customers could show off their NFTs on social media (Twitter Badges) or in other online communities, which could help to promote our brand, attract new customers and build/grow the community!

The \$Web3C governance token could be used for voting on future utilities across the entire ecosystem. This gives customers a say in the direction of the loyalty program and increases their engagement.

If a user pays for scorpion venom in tokenized coins, they are eligible for further discounts and we want to use the loyalty program to drive other desired actions throughout our ecosystem for example... "Stake 2,000 \$SCRP tokens & earn 5x \$Web3C loyalty tokens on every purchase."

NFTs and Governance Tokens

ENS subdomain NFTs serve as proof of membership, with customers holding the corresponding NFT for their membership level. These NFTs can also grant access to certain features on the web3 site, and can be flaunted on social media platforms or online communities for promotional purposes.

The \$Web3C governance token facilitates customer participation in the direction of the loyalty program. Customers can vote on future utilities across the entire ecosystem, increasing their engagement. Customers paying for scorpion venom in tokenized coins can receive further discounts.

The Future

The SCORPIONS NFT will act as proof of ownership in a 12 month supply of Blue Scorpion Venom, Membership [tokengate] to exclusive community, support of DeSci initiatives, and the Humane extraction of Biologically derived pharmaceutical peptides that promote the reduction of inflammation.

This is a new concept in exploring the limits of what NFT utility can really represent.

Our major Touchpoints

- Health of loved ones
- Promotion of Bio-Science research
- Ecological Preservation

- Promotion of creating emerging economies

Roadmap

SCORPIONS is the first NFT project on what we hope will be an expansive blockchain retail experience for both Dgens and crypto N00bs alike. We want to be able to give the non-Web3-native a simple, secure, and positive first Blockchain experience. The SCORPIONS NFT project is the inaugural project on what we hope will be a revolution in popular Web3 acceptance.

Founders Mint 500

A founders mint of 500 will be made available via Whitelist to our first 500 supporters at 1eth. These first 500 supporters will comprise our inner circle and have unrestricted access to all facets of the project, extended voting rights, and access to the core team for governance decisions. [they will be airdropped origin mint NFTs]

Origin Mint 1000

After successful completion of our Founders pass sale. An Origin mint of 1000 NFTs will be made available to our community tied to a 12 month subscription of Blue Scorpion Venom. NFT holders can choose to claim their venom or hold delivery to speculate on value. The Origin mint will represent the second ring of our inner circle, and in addition to extended access to governance, they will receive additional voting rights.

Monthly Tiered Mint [500-1000]

Upon Successful completion of our two inaugural mints, we will begin a more structured monthly mint of NFTs tied to product. With multiple tiers of subscription: 1mo. | 6mo. | 12mo. These NFTs will be given unique properties and community access based on commitment.

W3 Marketplace

With the successful implementation of the tiered product offering, we will deploy our hybrid Web2-Web3 marketplace, where Crypto Natives and Web3 Noobs can both Purchase NFT and products 1:1 and participate in community. It is our goal to have an endless product and brand categories on unique ledgers within our system - creating an ecosystem of web3 conscious - crypto oriented goods and services.

Authenticity / Supply Chain

We will perfect our NFT authentication process with Blue Scorpion Venom, and roll it out across all product categories. This Venom is a rare and valuable commodity. Careful Harvesting, Processing, and Refining the product is of the utmost importance, and the team at Blue Scorpion Venom International are the only ones officially licensed by the Department of Health in the Dominican Republic to do so. For immutable proof of authenticity we will institute a 1:1:1 [bottle to smart contract to buyer] NFT process to track the product throughout the supply chain and guarantee delivery to the correct buyer.

Custodial Wallets

It is our goal to help onboard non Web3 natives onto the blockchain in a seamless fashion. To that end everyone who purchases a product from our W3 Marketplace in non-crypto currency will be issued their own custodial wallet, and given instructions on how to use it. We will periodically airdrop discounts, governance coins, and additional NFT's of future projects.

\$Web3C Governance Token

We believe that the blockchain is going to be at it's best when non-web3-natives can participate in the open ledger without even having to see it. It is our goal to build out a web3 retail infrastructure that supports near imperceptible blockchain transactions. Showing only the benefits and utility of the ledger without all of the complexities and tedium of the blockchain. But we need the help of the community to make this right! To this end we will release a governance token, and airdrop them to all of the NFT holders who have participated in any of our projects. The \$Web3C governance token could be used for voting on future utilities across the entire ecosystem. This gives customers a say in the direction of the loyalty program and increases their engagement.

DeSci

SCORPIONS Promoting the Future of Science

Decentralized Science (DeSci) is a movement that aims to build public infrastructure for funding, creating, reviewing, crediting, storing, and disseminating scientific knowledge fairly and equitably using the Web3 stack.

Utilizing blockchain technology that enables researchers to create immutable, open, and censorship-resistant databases. These databases can also act as authentic records of ownership rights of scientific research. Token development in DeSci is a crucial tool for finance projects.

Decentralized Science, often referred to as DeSci, is a novel approach to scientific research that aims to address some of the inherent limitations and challenges associated with the traditional centralized model. In DeSci, the emphasis is placed on distributing research activities across multiple participants and fostering collaboration in an open and transparent manner. This paradigm shift seeks to enhance scientific progress, improve data integrity, and promote inclusivity in the scientific community.

One key aspect of DeSci is the utilization of decentralized technologies such as blockchain and distributed ledgers. These technologies enable the creation of a secure and immutable record of scientific data, ensuring transparency and traceability throughout the research process. By utilizing decentralized networks, DeSci eliminates the reliance on a central authority, allowing for greater autonomy and ownership of data by individual researchers. Moreover, it facilitates the development of decentralized peer-review systems, enabling a more inclusive and diverse scientific community to contribute to the validation of research findings.

DeSci promotes the principles of open science, encouraging the sharing of research data, methodologies, and results in a publicly accessible manner. This approach enhances scientific reproducibility and enables collaboration on a global scale. Decentralized funding models are emerging in DeSci, providing opportunities for researchers to secure funding through decentralized mechanisms, such as tokenized systems and crowdfunding platforms. This not only facilitates increased accessibility to resources but also encourages a broader range of research topics and perspectives.

DeSci represents a paradigm shift in scientific research, leveraging decentralized technologies and open collaboration to overcome traditional limitations. By embracing transparency, inclusivity, and open access, DeSci aims to enhance the efficiency and integrity of scientific endeavors. While the field is still evolving, it holds great promise for transforming the scientific landscape, promoting global collaboration, and accelerating scientific progress for the benefit of society as a whole.
